**Specificity**      **Mouse anti Human RUNX1 antibody** recognizes RUNX1, also known as AML1-EVI-1 fusion protein, Runt-related transcription factor 1, SL3/AKV core-binding factor alpha B subunit, acute myeloid leukemia 1 protein, oncogene AML-1 or polyomavirus enhancer-binding protein 2 alpha B subunit.

Core binding factor (CBF) is a heterodimeric transcription factor that binds to the core element of many enhancers and promoters. The protein encoded by RUNX1 gene represents the alpha subunit of CBF and is thought to be involved in the development of normal haematopoiesis. Chromosomal translocations involving RUNX1 are well-documented and have been associated with several types of leukemia ([Aydin et al. 2016](#)). Three transcript variants encoding different isoforms have been found for RUNX1 (provided by RefSeq, Jul 2008).

Mouse anti Human RUNX1 antibody detects a band of 55 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

**Western Blotting**      Anti RUNX1 detects a band of approximately 55 kDa in MOLT-4 cell lysate
