<b>Specificity</b>	<p><b>Mouse anti Human PLC gamma-1 antibody</b> recognizes the 1-phosphatidylinositol 4,5-bisphosphate phosphodiesterase gamma-1, also known as PLC-148, phosphatidylinositol phospholipase C or phosphoinositidase C.</p> <p>The protein encoded by PLCG1 gene catalyzes the formation of inositol 1,4,5-trisphosphate and diacylglycerol from phosphatidylinositol 4,5-bisphosphate. This reaction uses calcium as a cofactor and plays an important role in the intracellular transduction of receptor-mediated tyrosine kinase activators. For example, when activated by SRC, the encoded protein causes the Ras guanine nucleotide exchange factor RasGRP1 to translocate to the Golgi, where it activates Ras. Also, this protein has been shown to be a major substrate for heparin-binding growth factor 1 (acidic fibroblast growth factor)-activated tyrosine kinase. Two transcript variants encoding different isoforms have been found for PLCG1 (provided by RefSeq, Jul 2008).</p> <p>Mouse anti Human PLC gamma-1 antibody detects a band of 150 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti PLC gamma-1 detects a band of approximately 150 kDa in Jurkat cell lysates
