Fusion Partners	XYZ
Specificity	<p>Human anti Human Hsc70 antibody recognizes the heat shock protein family A (Hsp70) member 8 also known as LPS-associated protein 1, N-myristoyltransferase inhibitor protein 71, constitutive heat shock protein 70 or heat shock cognate protein 54.</p> <p>This gene encodes a member of the heat shock protein 70 family, which contains both heat-inducible and constitutively expressed members. This protein belongs to the latter group, which are also referred to as heat-shock cognate proteins. It functions as a chaperone, and binds to nascent polypeptides to facilitate correct folding. It also functions as an ATPase in the disassembly of clathrin-coated vesicles during transport of membrane components through the cell. Alternatively spliced transcript variants encoding different isoforms have been found for this gene (provided by RefSeq, Aug 2011).</p> <p>Human anti Human Hsc70 antibody detects a band of 73 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
Western Blotting	Human anti Hsc70 antibody detects a band of approximately 73 kDa in K562 cell lysates
