**Specificity**

**Human anti Human STUB1 antibody** recognizes STUB1, also known as E3 ubiquitin-protein ligase CHIP, CLL-associated antigen KW-8, STIP1 homology and U-box containing protein 1 or heat shock protein A binding protein 2.

This gene encodes a protein containing tetratricopeptide repeat and a U-box that functions as a ubiquitin ligase/cochaperone. The encoded protein binds to and ubiquitinates shock cognate 71 kDa protein (Hspa8) and DNA polymerase beta (Polb), among other targets. Mutations in this gene cause spinocerebellar ataxia, autosomal recessive 16. Alternative splicing results in multiple transcript variants. There is a pseudogene for this gene on chromosome 2 (provided by RefSeq, Jun 2014).

Human anti Human STUB1 antibody detects a band of 35 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.
