**Specificity**

**Mouse anti Human PI-3 kinase regulatory subunit 1 antibody** recognizes PI-3 kinase regulatory subunit 1 (PIK3R1), also known as p85, AGM7, GRB1, IMD36 or phosphatidylinositol 3-kinase regulatory subunit alpha.

Phosphatidylinositol 3-kinase phosphorylates the inositol ring of phosphatidylinositol at the 3-prime position. The enzyme comprises a 110 kDa catalytic subunit and a regulatory subunit of either 85, 55 or 50 kDa. This gene encodes the 85 kDa regulatory subunit. Phosphatidylinositol 3-kinase plays an important role in the metabolic actions of insulin, and a mutation in this gene has been associated with insulin resistance. Alternative splicing of this gene results in four transcript variants encoding different isoforms (provided by RefSeq, Jun 2011).

Mouse anti Human PI-3 kinase regulatory subunit 1 antibody detects a band of 85 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

**Western Blotting**
