<b>Synonyms</b>	KIAA0221, RENT1
<b>Specificity</b>	<p><b>Mouse anti Human UPF1 antibody</b> recognizes UPF1, also known as RENT1, NORF1, regulator of nonsense transcripts 1 or delta helicase.</p> <p>This gene encodes a protein that is part of a post-splicing multiprotein complex involved in both mRNA nuclear export and mRNA surveillance. mRNA surveillance detects exported mRNAs with truncated open reading frames and initiates nonsense-mediated mRNA decay (NMD). When translation ends upstream from the last exon-exon junction, this triggers NMD to degrade mRNAs containing premature stop codons. This protein is located only in the cytoplasm. When translation ends, it interacts with the protein that is a functional homolog of yeast Upf2p to trigger mRNA decapping. Use of multiple polyadenylation sites has been noted for this gene. Alternative splicing results in multiple transcript variants (provided by RefSeq, Jul 2014).</p> <p>Mouse anti Human UPF1 antibody detects a band of 143 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Mouse anti UPF1 antibody detects a band of approximately 143 kDa in HEK293 cell lysates
