	FOXA1 encodes a member of the forkhead class of DNA-binding proteins.	
	FOXA1 encodes a member of the forkhead class of DNA-binding proteins. These hepatocyte nuclear factors are transcriptional activators for liver-specific transcripts so as albumin and transthyretin, and they also interact with chromatin. Similar family members in mice have roles in the regulation of metabolism and in the differentiation the pancreas and liver (provided by RefSeq, Jul 2008).	
	Mouse anti Human FOXA1 antibody detects a band of 50 kDa. The antibody has bee extensively validated for western blotting using whole cell lysates.	n
