**Specificity** **Mouse anti Human nucleolin antibody** recognizes nucleolin.

Nucleolin (NCL), a eukaryotic nucleolar phosphoprotein, is involved in the synthesis and maturation of ribosomes. It is located mainly in dense fibrillar regions of the nucleolus. Human NCL gene consists of 14 exons with 13 introns and spans approximately 11kb. The intron 11 of the NCL gene encodes a small nucleolar RNA, termed U20 (provided by RefSeq, Jul 2008).

Mouse anti Human nucleolin antibody detects a band of 100 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

**Western Blotting** Mouse anti nucleolin antibody detects a band of approximately 100 kDa in HEK293 cell lysates
