Synonyms	STAT5
Specificity	<p>Mouse anti Human STAT5A antibody, clone OTI6D6 recognizes the signal transducer and activator of transcription 5A</p> <p>Encoded by STAT5A gene, signal transducer and activator of transcription 5A is a member of the STAT family of transcription factors. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein is activated by, and mediates the responses of many cell ligands, such as IL2, IL3, IL7 GM-CSF, erythropoietin, thrombopoietin, and different growth hormones. Activation of this protein in myeloma and lymphoma associated with a TEL/JAK2 gene fusion is independent of cell stimulus and has been shown to be essential for the tumorigenesis. The mouse counterpart of STAT5A is found to induce the expression of BCL2L1/BCL-X(L), which suggests the antiapoptotic function of STAT5A in cells (provided by RefSeq, Jul 2008).</p> <p>Mouse anti Human STAT5A antibody, clone OTI6D6 detects a band of 90 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
Western Blotting	Mouse anti STAT5A detects a band of approximately 90 kDa in K562 cell lysates
