<b>Specificity</b>	<b>Mouse anti EGF receptor antibody</b> recognizes the epidermal growth factor receptor, also known as proto-oncogene c-ErbB-1 or receptor tyrosine-protein kinase erbB-1, when phosphorylated at tyrosine 845. EGF R is a cell surface receptor for members of the epidermal growth factor family. EGF R plays a role in numerous cellular processes such as cell proliferation and apoptosis through the activation of downstream signaling pathways ( <a href="#">Scaltriti and Baselga 2006</a> ). EGF R is phosphorylated on tyrosine 845 by c-Src kinase ( <a href="#">Biscardi et al. 1999</a> ). This modification modulates a variety of cellular functions by activating downstream signaling kinases ( <a href="#">Sato 2013</a> ).
