<b>Specificity</b>	<b>Mouse anti Human EGF receptor antibody</b> recognizes the epidermal growth factor receptor, also known as proto-oncogene c-ErbB-1 or receptor tyrosine-protein kinase erbB-1, when phosphorylated at tyrosine 1068. EGF R plays a role in numerous cellular processes such as cell proliferation and apoptosis through the activation of downstream signaling pathways ( <a href="#">Scaltriti and Baselga 2006</a> ). EGF R is autophosphorylated at tyrosine 1068 upon ligand binding and receptor dimerization ( <a href="#">Downward et al. 1984</a> ; <a href="#">Bishayee et al. 1999</a> ). Phosphorylation of this residue is required for binding of Grb2 adaptor protein ( <a href="#">Yamauchi et al. 1997</a> ).
<b>Western Blotting</b>	Mouse anti EGF receptor (pTyr1068) detects a band of approximately 175 kDa in pervanadate-treated A431 (treated lysate) cell lysates
<b>Storage</b>	Store undiluted at -20°C, avoiding repeated freeze thaw cycles
