**Specificity**   **Mouse anti BAG2 antibody** recognizes BAG family molecular chaperone regulator 2, also known as Bcl-2-associated athanogene 2.

BAG2 is a member of the BAG family. These proteins interact with the molecular chaperone HSP70, dictating HSP70 interactions with client proteins and apoptosis. BAG2 also interacts with a range of other molecules, regulating various cellular functions ([Qin et al. 2016](#)). BAG2 phosphorylation by MAPKAP kinase 2 is part of the p38 signaling pathway in response to extracellular stress ([Ueda et al. 2004](#)). BAG2 is induced by proteasome inhibitors and appears to promote apoptosis in cancer cells ([Wang et al. 2008](#)). BAG2 has also been implicated in Parkinson's disease ([Fukuzono et al. 2016](#)) and Alzheimer's disease ([de Paula et al. 2016](#)). BAG2 may be involved in simian virus 40 infection ([Dupzyk and Tsai, 2018](#)).
