<b>Synonyms</b>	MADH5
<b>Fusion Partners</b>	Spleen cells from immunised BALB/c mice were fused with cells of the mouse SP2/0 myeloma cell line
<b>Specificity</b>	<p><b>Mouse anti SMAD5 antibody</b> recognizes mothers against decapentaplegic homolog 5, also known as JV5-1 and MADH5. SMADs are a group of transcription factors that transmit signals from TGF-beta at the cell surface to the nucleus (<a href="#">Li et al. 2018</a>). TGF-beta signaling is crucial for adult homeostasis and also proper embryonic development. Related to the function of TGF-beta in development, SMAD5 knockout in mice results in early embryonic lethality. SMAD5 is closely related to SMAD1 and SMAD8, and primarily mediates bone morphogenetic protein (Bmp) signaling (<a href="#">Umans et al. 2007</a>). SMAD5 has been shown to be involved with tumor progression, and SMAD5 appears to be required for chemoresistance in triple negative breast carcinoma cells (<a href="#">Opyrchal et al. 2017</a>).</p>
<b>Western Blotting</b>	Mouse anti SMAD5 detects a band of approximately 55 kDa in K562 cell lysates
