**Specificity** **Rabbit anti Human DNA methyltransferase 1 antibody** recognizes human DNA (cytosine-5) methyltransferase 1, also known as DNMT1, CXXC-type zinc finger protein 9, MCMT or DNA methyltransferase Hsa1. DNA methyltransferase 1 is a 1616 amino acid member of the C5-methyltransferase family, bearing 2 [BAH](#) domains and single [CXXC-type zinc finger](#), [DMAP](#)-interaction and [SAM-dependent MTase C5-type](#) domains. The epitope recognized by Rabbit anti Human DNA methyltransferase 1 antibody maps to a region between residues 700 and 750 of human DNMT1.

DNMT1 is a nuclear enzyme with a major role in the maintenance of DNA methylation patterns after replication ([Song et al. 2012](#)). DNA methylation is significant for epigenetic regulation of gene expression, X chromosome inactivation, genomic imprinting, and development ([Lee et al. 2001](#)). Overexpression of DNMT1 has been detected in several human cancers ([Robertson et al. 1999](#)).

Rabbit anti Human DNA methyltransferase 1 antibody recognizes human DNA methyltransferase 1 as a band of ~180 kDa in multiple human cell lysates by western blotting under reducing conditions.

---

**Western Blotting** Anti DNA Methyltransferase 1 antibody detects a band of approximately 180 kDa in HEK293 cell lysates.

---

**Storage** Store undiluted at -20°C, avoiding repeated freeze thaw cycles.
