Specificity	Rabbit anti Human ROBO1 antibody recognizes the ROBO1 protein

ROBO1 is a member of the immunoglobulin gene superfamily and encodes an integral membrane protein that functions in axon guidance and neuronal precursor cell migration. This receptor is activated by SLIT-family proteins, resulting in a repulsive effect on glioma cell guidance in the developing brain. A related gene is located at an adjacent region on chromosome 3. Multiple transcript variants encoding different isoforms have been found for ROBO1 (provided by RefSeq, Mar 2009).

Rabbit anti Human ROBO1 antibody detects a band of 250 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

Western Blotting	Anti ROBO1 detects a band of approximately 250 kDa in HeLa
