**Product Details**

**Applications**
This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit [www.bio-rad-antibodies.com/protocols](http://www.bio-rad-antibodies.com/protocols).

**PrecisionAb antibodies have been extensively validated for the western blot application.** The antibody has been validated at the suggested dilution. Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Further optimization may be required dependant on sample type.

**Target Species**
Human

**Product Form**
Purified IgG - liquid

**Preparation**
Rabbit polyclonal antibody purified by affinity chromatography

**Buffer Solution**
Phosphate buffered saline

**Preservative Stabilisers**
0.09% Sodium Azide (NaN₃)

**Immunogen**
KLH conjugated synthetic peptide between 1840-1867 amino acids from the C-terminal region of human myosin heavy chain 9

**Entrez Gene:**
4627 MYH9 Related reagents

**Specificity**
Rabbit anti Human myosin heavy chain 9 antibody recognizes myosin heavy chain 9, also known as cellular myosin heavy chain, type A, myosin-9, non-muscle myosin heavy chain A, non-muscle myosin heavy chain IIa, non-muscle myosin heavy polypeptide 9 and nonmuscle myosin heavy chain II-A.
Encoded by the MYH9 gene, myosin heavy chain 9 (myosin-9) is a conventional non-muscle myosin; this protein should not be confused with the unconventional myosin-9a or 9b (MYO9A or MYO9B). This protein contains an IQ domain and a myosin head-like domain which is involved in several important functions, including cytokinesis, cell motility and maintenance of cell shape. Defects in MYH9 have been associated with non-syndromic sensorineural deafness autosomal dominant type 17, Epstein syndrome, Alport syndrome with macrothrombocytopenia, Sebastian syndrome, Fechtner syndrome and macrothrombocytopenia with progressive sensorineural deafness (provided by RefSeq, Dec 2011).

Rabbit anti Human myosin heavy chain 9 antibody detects a band of 227 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

**Western Blotting**

Anti myosin heavy chain 9 detects a band of approximately 227 kDa in Jurkat cell lysates

**Instructions For Use**

Please refer to the PrecisionAb western blotting protocol. For additional information on secondary antibody dilution and exposure time see product web page.

**Storage**

Store undiluted at -20°C, avoiding repeated freeze thaw cycles.

**Guarantee**

As supplied, 12 months from date of despatch.

**Acknowledgements**

PrecisionAb™ is a trademark of Bio-Rad Laboratories.

**Health And Safety Information**

**Regulatory**

For research purposes only

**Recommended Secondary Antibodies**

Goat Anti Rabbit IgG (H/L) (STAR208...) HRP
