<b>Specificity</b>	<p><b>Rabbit anti Human disabled homolog 2 antibody</b> recognizes disabled homolog 2, also known as differentially-expressed protein 2 and mitogen-responsive phosphoprotein.</p> <p>Encoded by the DAB2 gene, disabled homolog 2 is a mitogen-responsive phosphoprotein. It is expressed in normal ovarian epithelial cells, but is down-regulated or absent from ovarian carcinoma cell lines, suggesting its role as a tumor suppressor. This protein binds to the SH3 domains of GRB2, an adaptor protein that couples tyrosine kinase receptors to SOS (a guanine nucleotide exchange factor for Ras), via its C-terminal proline-rich sequences, and may thus modulate growth factor/Ras pathways by competing with SOS for binding to GRB2. Alternatively spliced transcript variants encoding different isoforms have been found for DAB2 (provided by RefSeq, Oct 2011).</p> <p>Rabbit anti Human disabled homolog 2 antibody detects a band of 96 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti disabled homolog 2 detects a band of approximately 96 kDa in HeLa cell lysates.
