

## Datasheet: VPA00267

<b>Description:</b>	RABBIT ANTI FEN1
<b>Specificity:</b>	FEN1
<b>Format:</b>	Purified
<b>Product Type:</b>	PrecisionAb Polyclonal
<b>Isotype:</b>	Polyclonal IgG
<b>Quantity:</b>	100 µl

## Product Details

### Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit [www.bio-rad-antibodies.com/protocols](http://www.bio-rad-antibodies.com/protocols).

	Yes	No	Not Determined	Suggested Dilution
Western Blotting	▪			1/1000

**The PrecisionAb label is reserved for antibodies that meet the defined performance criteria within Bio-Rad's ongoing antibody validation programme. Click [here](#) to learn how we validate our PrecisionAb range.** Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Further optimization may be required dependent on sample type.

<b>Target Species</b>	Human
<b>Product Form</b>	Ig fraction - liquid
<b>Preparation</b>	Rabbit Ig fraction prepared by ammonium sulphate precipitation
<b>Buffer Solution</b>	Phosphate buffered saline
<b>Preservative Stabilisers</b>	0.09% Sodium Azide (NaN <sub>3</sub> )
<b>Immunogen</b>	KLH-conjugated synthetic peptide corresponding to aa 243-272 of human FEN1

<b>Synonyms</b>	RAD2
-----------------	------

---

<b>Specificity</b>	<b>Rabbit anti Human FEN1 antibody</b> recognizes FEN1, also known as DNase IV, flap structure-specific endonuclease 1, maturation factor 1, MF1 and RAD2.
--------------------	--

The protein encoded by the FEN1 gene removes 5' overhanging flaps in DNA repair and processes the 5' ends of Okazaki fragments in lagging strand DNA synthesis. Direct physical interaction between this protein and AP endonuclease 1 during long-patch base excision repair provides coordinated loading of the proteins onto the substrate, thus passing the substrate from one enzyme to another. The protein is a member of the XPG/RAD2 endonuclease family and is one of ten proteins essential for cell-free DNA replication. DNA secondary structure can inhibit flap processing at certain trinucleotide repeats in a length-dependent manner by concealing the 5' end of the flap that is necessary for both binding and cleavage by the protein encoded by FEN1. Therefore, secondary structure can deter the protective function of this protein, leading to site-specific trinucleotide expansions (provided by RefSeq, Jul 2008).

Rabbit anti Human FEN1 antibody detects a band of 45 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

---

<b>Western Blotting</b>	Anti FEN1 detects a band of approximately 45 kDa in HCT-116 cell lysate
-------------------------	---

---

<b>Storage</b>	Store undiluted at -20°C, avoiding repeated freeze thaw cycles
----------------	--

---

<b>Guarantee</b>	12 months from date of despatch
