**Specificity** **Rabbit anti Human MAPK9 / JNK2 antibody** recognizes MAP kinase 9 (MAPK9), also known as c-Jun N-terminal kinase 2, c-Jun kinase 2, stress-activated protein kinase 1a and stress-activated protein kinase JNK2.

MAPK9 is a member of the MAP kinase family. MAP kinases act as an integration point for multiple biochemical signals, and are involved in a wide variety of cellular processes such as proliferation, differentiation, transcription regulation and development. This kinase targets specific transcription factors, and thus mediates immediate-early gene expression in response to various cell stimuli. It is most closely related to MAPK8, both of which are involved in UV radiation induced apoptosis, thought to be related to the cytochrome c-mediated cell death pathway. MAPK9 and MAPK8 are also known as c-Jun N-terminal kinases. This kinase blocks the ubiquitination of tumor suppressor p53, and thus it increases the stability of p53 in non-stressed cells. Murine MAPK9 suggest a key role in T-cell differentiation. Several alternatively spliced transcript variants encoding distinct isoforms have been reported (provided by RefSeq, Sep 2008).

Rabbit anti Human MAPK9 / JNK2 antibody detects a band of 54 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.
