<b>Synonyms</b>	HMGIC
<b>Specificity</b>	<p><b>Rabbit anti Human high mobility group protein HMGI-C antibody</b> recognizes high-mobility group protein HMGI-C also known as high mobility group AT-hook 2 and HMGA2.</p> <p>Encoded by the HMGA2 gene, high mobility group protein HMGI-C belongs to the non-histone chromosomal high mobility group (HMG) protein family. HMG proteins function as architectural factors and are essential components of the enhanceosome. This protein contains structural DNA-binding domains and may act as a transcriptional regulating factor. Identification of the deletion, amplification, and rearrangement of HMGA2 that are associated with myxoid liposarcoma suggests a role in adipogenesis and mesenchymal differentiation. A gene knock out study of the mouse counterpart demonstrated that HMGA2 is involved in diet-induced obesity. Alternate transcriptional splice variants, encoding different isoforms, have been characterized (provided by RefSeq, Jul 2008).</p> <p>Rabbit anti Human high mobility group protein HMGI-C antibody detects a band of 18 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti high mobility group protein HMGI-C detects a band of approximately 18 kDa in HepG2 cell lysate
