**Specificity**

**Rabbit anti Human RPL4 antibody** recognizes RPL4, also known as 60S ribosomal protein L4.

Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. RPL4 encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L4E family of ribosomal proteins. It is located in the cytoplasm. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of RPL4 dispersed through the genome (provided by RefSeq, Jul 2008).

Rabbit anti Human RPL4 antibody detects a band of 48 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

**Western Blotting**
