<b>Synonyms</b>	HADH
<b>Specificity</b>	<p><b>Rabbit anti Human HADHA antibody</b> recognizes HADHA, also known as 3-ketoacyl-Coenzyme A (CoA) thiolase, alpha subunit, 3-oxoacyl-CoA thiolase, 78 kDa gastrin-binding protein or long-chain-3-hydroxyacyl-CoA dehydrogenase.</p> <p>HADHA gene encodes the alpha subunit of the mitochondrial trifunctional protein, which catalyzes the last three steps of mitochondrial beta-oxidation of long chain fatty acids. The mitochondrial membrane-bound heterocomplex is composed of four alpha and four beta subunits, with the alpha subunit catalyzing the 3-hydroxyacyl-CoA dehydrogenase and enoyl-CoA hydratase activities. Mutations in HADHA gene result in trifunctional protein deficiency (<a href="#">MTPD</a>). The genes of the alpha and beta subunits of the mitochondrial trifunctional protein are located adjacent to each other in the human genome in a head-to-head orientation (provided by RefSeq, Jul 2008).</p> <p>Rabbit anti Human HADHA antibody detects a band of 78 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti HADHA detects a band of approximately 78 kDa in HepG2 cell lysates.
