<b>Specificity</b>	<b>Rabbit anti Human high mobility group protein B2 antibody</b> recognizes high mobility group

protein B2, also known as HMG-2, high mobility group protein 2, high-mobility group (non-histone chromosomal) protein 2 or high-mobility group box 2.

HMGB2 gene encodes a member of the non-histone chromosomal high mobility group protein family. The proteins of this family are chromatin-associated and ubiquitously distributed in the nucleus of higher eukaryotic cells. *In vitro* studies have demonstrated that this protein is able to efficiently bend DNA and form DNA circles (Paull *et al.* 1993). These studies suggest a role in facilitating cooperative interactions between cis-acting proteins by promoting DNA flexibility. This protein was also reported to be involved in the final ligation step in DNA end-joining processes of DNA double-strand breaks repair and V(D)J recombination (Nagaki *et al.* 1998) (provided by RefSeq, Jul 2008).

Rabbit anti Human high mobility group protein B2 antibody detects a band of 28 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.
