**Specificity** **Rabbit anti Human ASF1A antibody** recognizes the histone chaperone ASF1A, also known as ASF1 anti-silencing function 1 homolog A, CCG1-interacting factor A, FRPL or HSPC146.

ASF1A gene encodes a member of the H3/H4 family of histone chaperone proteins and is similar to the anti-silencing function-1 gene in yeast. The protein is a key component of a histone donor complex that functions in nucleosome assembly. It interacts with histones H3 and H4, and functions together with a chromatin assembly factor during DNA replication and repair (provided by RefSeq, Jul 2008).

Rabbit anti Human ASF1A antibody detects a band of 18 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

---

**Western Blotting** Anti ASF1A detects a band of approximately 18 kDa in HeLa cell lysates.
