<b>Specificity</b>	<p><b>Rabbit anti Human cyclophilin B antibody</b> recognizes cyclophilin B also known as peptidyl-prolyl cis-trans isomerase B, PPIB, PPIase B, S-cyclophilin, cyclophilin-like protein, epididymis secretory protein Li 39, peptidyl-prolyl cis-trans isomerase B, rotamase B or SYP-S1.</p> <p>The protein encoded by PPIB gene is a cyclosporine-binding protein and is mainly located within the endoplasmic reticulum. It is associated with the secretory pathway and released in biological fluids. This protein can bind to cells derived from T- and B-lymphocytes, and may regulate cyclosporin A-mediated immunosuppression (provided by RefSeq, Oct 2009). Mutations in the PPIB gene lead to development of Osteogenesis imperfecta 9 (<a href="#">OI9</a>) , a connective tissue disorder characterized by low bone mass, bone fragility and susceptibility to fractures after minimal trauma (<a href="#">van Dijk et al. 2009</a>).</p> <p>Rabbit anti Human cyclophilin B antibody detects a band of 20 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti cyclophilin B detects a band of approximately 20 kDa in A431 cell lysates.
