Specificity

Rabbit anti Human heat shock 70 kDa protein 5 antibody recognizes heat shock 70 kDa protein 5, also known as HSPA5, 78 kDa glucose-regulated protein or immunoglobulin heavy chain-binding protein.

The protein encoded by this gene is a member of the heat shock protein 70 (HSP70) family. It is localized in the lumen of the endoplasmic reticulum (ER), and is involved in the folding and assembly of proteins in the ER. As this protein interacts with many ER proteins, it may play a key role in monitoring protein transport through the cell (provided by RefSeq, Sep 2010).

Rabbit anti Human heat shock 70 kDa protein 5 detects a band of 78 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

Western Blotting

Anti heat shock 70 kDa protein 5 antibody recognizes a band of approximately 78 kDa in Raji cell lysates.
