Specificity

Rabbit anti Human ARPC5 antibody recognizes ARPC5, also known as actin-related protein 2/3 complex subunit 5.

ARPC5 encodes one of seven subunits of the human Arp2/3 protein complex. The Arp2/3 protein complex has been implicated in the control of actin polymerization in cells and has been conserved through evolution. The exact role of the protein encoded by ARPC5, the p16 subunit, has yet to be determined. Alternatively spliced transcript variants encoding different isoforms have been observed for ARPC5 (provided by RefSeq, Jul 2012).

Rabbit anti Human ARPC5 antibody detects a band of 16 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

Western Blotting

Anti ARPC5 antibody recognizes a band of approximately 16 kDa in THP-1 cell lysates
