Specificity

Rabbit anti Human PIN1 antibody recognizes PIN1, also known as PPIase PIN1, peptidyl-prolyl cis-trans isomerase NIMA-interacting 1 and rotamase PIN1.

Peptidyl-prolyl cis/trans isomerases (PPIases) catalyze the cis/trans isomerization of peptidyl-prolyl peptide bonds. PIN1 encodes one of the PPIases, which specifically binds to phosphorylated ser/thr-pro motifs to catalytically regulate the post-phosphorylation conformation of its substrates. The conformational regulation catalyzed by this PPIase has a profound impact on key proteins involved in the regulation of cell growth, genotoxic and other stress responses, the immune response, induction and maintenance of pluripotency, germ cell development, neuronal differentiation, and survival. This enzyme also plays a key role in the pathogenesis of Alzheimer's disease and many cancers. Multiple alternatively spliced transcript variants have been found for PIN1 (provided by RefSeq, Jun 2011).

Rabbit anti Human PIN1 antibody detects a band of 18 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

Western Blotting

Anti PIN1 antibody recognizes a band of approximately 18 kDa in LNCaP cell lysates
