<b>Specificity</b>	<p><b>Rabbit anti Human UBE2B antibody</b> recognizes the ubiquitin-conjugating enzyme E2 B, also known as E2 protein, ubiquitin-conjugating enzyme E2-17 kDa, ubiquitin-conjugating enzyme E2B (RAD6 homolog), or ubiquitin-protein ligase B.</p> <p>The modification of proteins with ubiquitin is an important cellular mechanism for targeting abnormal or short-lived proteins for degradation. Ubiquitination involves at least three classes of enzymes: ubiquitin-activating enzymes, or E1s, ubiquitin-conjugating enzymes, or E2s, and ubiquitin-protein ligases, or E3s. UBE2B encodes a member of the E2 ubiquitin-conjugating enzyme family. This enzyme is required for post-replicative DNA damage repair. Its protein sequence is 100% identical to the mouse, rat, and rabbit homologs, which indicates that this enzyme is highly conserved in eukaryotic evolution (provided by RefSeq, Jul 2008).</p> <p>Rabbit anti Human UBE2B antibody detects a band of 17 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
